Re: Subsurface Investigation Results Report
1522 Fishburn Avenue (former Atlas Rubber)
Los Angeles, California 90063
Priority D-1 Site; Case ID #R-40786

Dear Dr. Lu:

On behalf of its client, Mr. Robert Winters, Targhee, Incorporated is pleased to submit the following report of subsurface investigation at the above-referenced property.

This investigation was conducted at the request of the CRWQCB according to its June 30, 2005 letter. This investigation was self-directed since the site was determined low-risk by CRWQCB staff.

Thank you for your timely assistance in the review of this report. If you should have questions, please contact Linda Norwood at your earliest convenience.

Sincerely,
Linda D. Norwood
Project Manager
RFA II No. 20178

ENVIRONMENTAL CONSULTING

SUBSURFACE INVESTIGATION RESULTS REPORT

1522 Fishburn Avenue
Los Angeles, California 90063

This report has been prepared based upon the results of the subsurface investigation conducted at the above-referenced site on August 16 through August 19, 2005. Attachment A is the areal location of the site. The investigation was performed at the request of the California Regional Water Quality Control Board-Los Angeles Region ("CRWQCB-LAR") in its letter dated June 30, 2005.

The CRWQCB-LAR listed four items of concern as follows:

- The vertical extent of soil contamination had not been adequately defined in SB-1, SB-4 and SB-5;
- The lateral extent of soil contamination had not been adequately defined in the areas north and west of SB-4 and west of SB-1;
- Naphthalene and 1,2-dichloroethane were present in soil in concentrations exceeding their U.S. Environmental Protection Agency ("EPA") Industrial Preliminary Remediation Goals ("PRGs"); and,
- Groundwater data had not been collected.

If groundwater beneath the site was found to have been impacted by chemicals detected during this subsurface investigation, the CRWQCB-LAR required the installation of a minimum of three groundwater monitoring wells.

Targhee conducted this investigation, based on its July 11, 2005 workplan entitled "CRWQCB-Mandated Subsurface Investigation" which is included as Attachment B.

PRE-INVESTIGATION TASKS

A permit to install temporary monitoring wells was obtained from the County of Los Angeles - Department of Health Services Public Health Programs - Environmental Health, Water & Sewage/Mountain & Rural Programs - Environmental Health Division. The permit number was 8603. As required by the permit, Targhee contacted the inspector 48 hours prior to anticipated installation of the temporary wells. A copy of the permit is provided in Attachment C.

As required by OSHA, a site-specific Health and Safety Plan was developed specifically for this subsurface investigation. The Health and Safety Plan was maintained on site during the investigation. A tail-gate health and safety meeting was conducted by Targhee each morning before work began.

Prior to conducting the subsurface investigation Targhee pre-marked the proposed drilling locations on site and contacted Underground Services Alert at least 48 hours prior to work beginning. The job number provided by Underground Services Alert was A2221751.

SUBSURFACE INVESTIGATION

In each of the six borings, Targhee collected soil samples from each interval as described below. The soil samples were collected into brass tubes and pre-weighed 5-milliliter VOA vials containing a sodium bisulfate solution preservative (preparation method 5035). In addition, a 5-gram portion from selected soil samples was also placed into pre-weighed 5-ml VOAs containing methanol. The brass tubes were capped, labelled and placed into an ice chest maintained at 4°C. VOA sample containers were also labelled and placed into the ice chest until delivery to a state-certified laboratory (American Scientific Laboratories, LLC, ELAP #2200) after each day of sampling was completed.

The vertical extent of soil contamination was further investigated at SB-6, SB-7 and SB-8, as shown on the attached soil boring location map. A hollow-stem auger rig was used to advance the boring at each of these locations to 70 feet below ground surface ("bgs"). Soil samples were collected at five foot intervals from 40 to 70 feet bgs at SB-6, SB-7 and SB-8. Groundwater was not encountered. Because of uncertainty of the actual depth to groundwater beneath the site, and the CRWQCB's concern about previously encountered soil contaminants' impacting groundwater, Targhee directed that drilling be continued to 90 and 95 feet bgs (without obtaining soil samples for laboratory analysis) at SB-7 and SB-8. Groundwater was still not encountered. A decision was made to not increase boring depth to locate groundwater until analytical results were received to indicate whether significant soil contamination existed at 70 feet.

The lateral extent of soil contamination was also investigated west and north of SB-4 and west of SB-1 using a hollow-stem auger. A soil boring was located to the north of SB-4 ("SB-9"), to the west of SB-4 ("SB-10") and to the west of SB-1 ("SB-11"). Soil samples were collected from SB-9, SB-10 and SB-11 starting at 5 feet bgs and continuing to 70 feet bgs. These borings were also advanced using a hollow-stem auger. The limited access rig could

not be used for SB-11 because of height restrictions (roof); therefore, SB-11 was advanced by slant drilling technique. In these borings, soil samples were collected every 5 feet bgs, beginning at 5 feet bgs and continuing to 70 feet.

A soil boring location map is provided as Attachment D. All work was supervised by a California Professional Geologist. His boring logs are included in Attachment E.

ANALYTICAL PROTOCOL

Soil samples collected from SB-6, SB-7 and SB-8 (40-70 ft bgs, 5-foot intervals) were analyzed using EPA Method 8260B for volatile organic compounds ("VOCs"), fuel oxygenates, gasoline and ethanol. Samples were not analyzed for diesel fuel since it was not detected in previous investigations.

The soil samples collected from the 10-foot intervals between 0 and 50 feet bgs and the 5-foot interval samples from 55-70 feet in SB-9, SB-10 and SB-11) were analyzed for VOCs, fuel oxygenates, gasoline and ethanol using EPA Method 8260B. The soil samples collected but not analyzed were archived by the laboratory for future analysis, if necessary.

The analytical detection limits conform to the Regional Board General Laboratory Testing Requirements (1/05).

The chain of custody and analytical data are contained in Attachment F.

ANALYTICAL RESULTS and CONCLUSIONS

Ethanol, BTEX, MTBE, and other VOCs were not present in any of the soil samples collected and analyzed.

Gasoline, TBA and/or 1,2-DCA were present in SB-9, SB-10 and/or SB-11. Gasoline was not present deeper than 20 feet bgs. TBA and 1,2-DCA were not present deeper than 40 feet bgs.

The material present as gasoline (C4-C12) is likely comprised of non-toxic alkanes and alkenes. The toxic, aromatic components (BTEX) normally associated with gasoline were not detected. The data indicate that the former tank contained gasoline at one time, but based on the analytical data, the material is quite weathered/old.

Please refer to Attachment G which contains analytical results in tabular form.

According to the California Regional Water Quality Control Board - Los Angeles Region 4's 1996 "Interim Site Assessment & Cleanup Guidebook" Table 4.1: Maximum Soil Screening Levels (mg/kg) for TPH and BTEX above Drinking Water Aquifers, the allowable level for TPH-gasoline (C4-C12) to remain in soil is 100,000 µg/kg at less than 20 feet above groundwater. From Targhee's October 2004 investigation and this investigation, it can be stated that groundwater is at least 65 feet from the deepest depth at which gasoline was detected (35 feet bgs).

The TBA detected is likely a gasoline constituent. The highest concentration of TBA detected during this investigation was 396 µg/kg. The TBA, in this case, is not indicative of MTBE degradation (MTBE has never been detected on site). TBA has been shown to be a gasoline additive in its own right. The calculated Hazard Index of TBA at 396 µg/kg is 0.000132, which is much less than the 1.0 which is commonly used as the action level.

The 1,2-DCA is present as a probable component of gasoline. 1,2-DCA's PRG is 280 µg/kg. The highest concentration of 1,2-DCA encountered during this investigation was 400 µg/kg at 20 feet bgs in SB-9. This concentration dropped over tenfold to 22 µg/kg at 30 feet and was not present through the remainder of that soil column. Again, there is no threat to groundwater from this material.

Naphthalene was present in only one location at shallow depth in a concentration of 15 µg/kg. This is not indicative of a site-wide problem or a threat to groundwater.

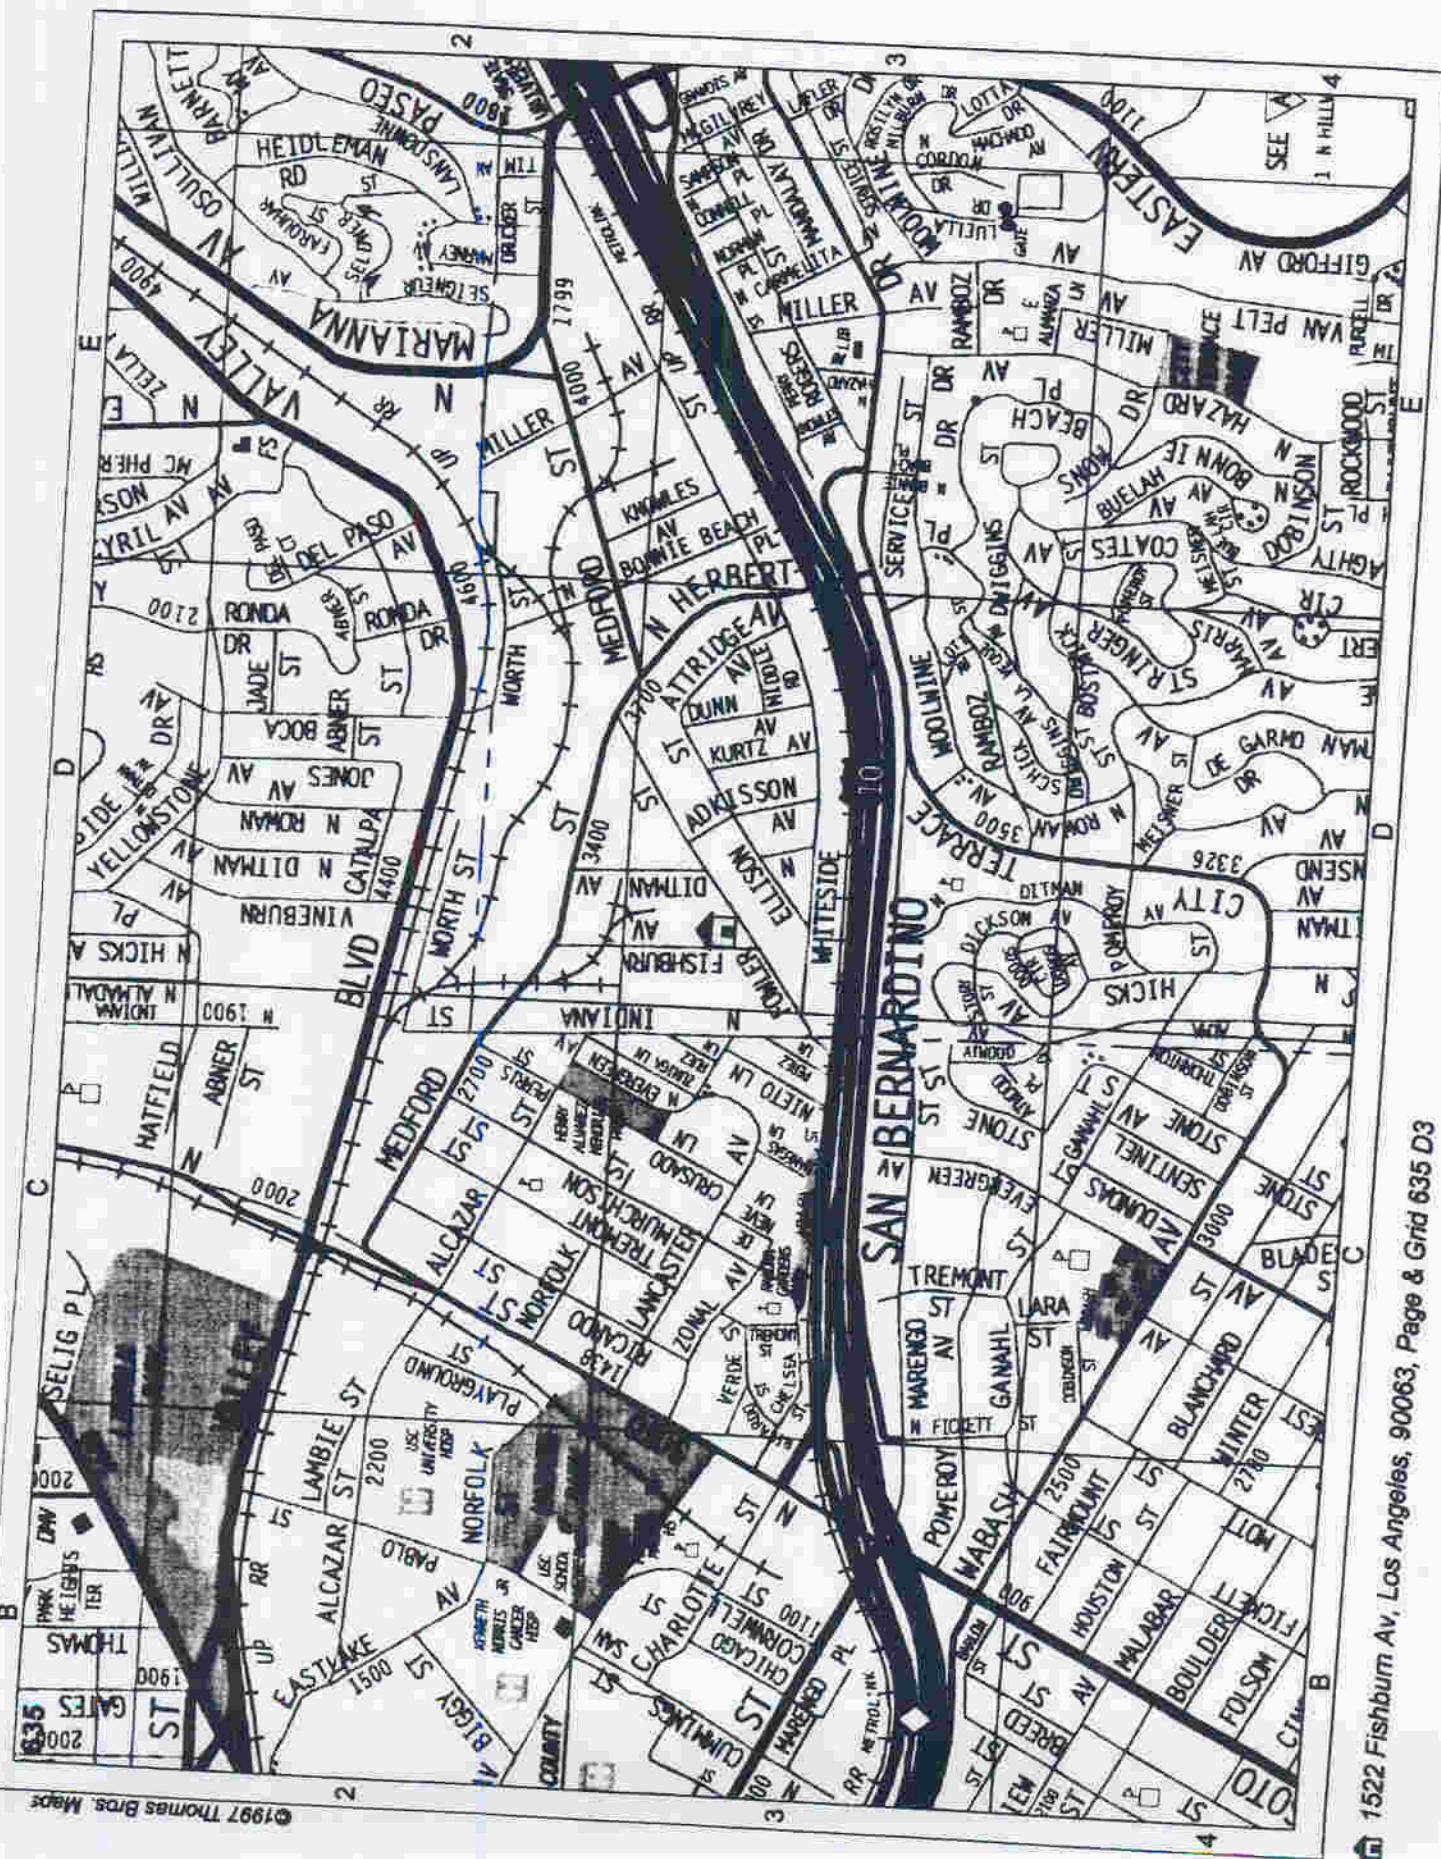

Groundwater was not encountered to depths of 95 feet bgs. Additional attempts to locate groundwater are not warranted.

Given that the last contaminant detected in soil was present at 40 feet bgs and that there exists a "clean" interval of about 30 feet to the last sample obtained at 70 feet and that groundwater is deeper than 95 feet bgs, it should be concluded that groundwater contamination by chemicals detected in the more shallow subsurface soil beneath the site has not occurred and there is no future threat to groundwater by these chemicals. The tank source has been removed, the contaminants have likely been present for a number of years and have not moved vertically or horizontally in a significant manner, and there is no driving force pushing the chemicals further into the subsurface because the source has been removed and the site is effectively capped by overlying pavement.

Because the soil contaminants encountered do not exceed their PRGs except for the one instance of 1,2-DCA described above and it has been indirectly demonstrated that groundwater has not been impacted by materials detected in shallow soil samples, a RAP is not warranted and will not be submitted.

The soil contaminants remaining will continue to undergo natural degradation. Remediation is not warranted because the quantity and concentration of the materials present in the soil are not hazardous and do not pose a threat to human health or the environment. In addition, those materials that are in the more clayey-type soil will not respond to a vapor extraction system, and there is too much soil too deep for too little contaminant to justify the expense of excavating and hauling the material off site. Targhee recommends closure with no remediation and no additional investigations.

**UNDERGROUND STORAGE TANKS PROGRAM – SUBSURFACE INVESTIGATION
ATLOS RUBBER, INC. (PRIORITY D-1 SITE)
1522 FISHBURN AVE., LOS ANGELES (CASE ID #R-40786)**

Dear Mr. Winters:

Recently, Regional Board staff conducted a thorough review of files and documents pertaining to the subject site in an effort to determine if the site is eligible for a low-risk closure. This letter intends to provide a brief background and update of the compliance status, and to specify Regional Board comments and requirements.

I. Background and Status of Compliance

The subject site was formerly occupied by Atlos Rubber, Inc from the 1970s to 2004. Prior to Atlos' occupation, the site was used as part of a shellac refinery and paint manufacturing facility. Three underground storage tanks (USTs) were removed from the site along with approximately 130 tons of soil. The USTs consisted of one unknown UST that was removed in the 1960s, one 2,000-gallon UST that was removed in February 2004, and one 3,000-gallon UST that was removed in March 2004. The USTs removed in 2004 most likely contained paint thinner and possibly gasoline.

According to technical reports on file with the Regional Board, a site assessment was conducted in October 2004. Five soil borings (SB1 through SB5) were advanced to a maximum depth of 45 feet below ground surface (bgs). Soil samples collected from the borings detected gasoline up to 4,040 milligram per kilogram (mg/kg), ethylbenzene up to 2.2 mg/kg, naphthalene up to 10 mg/kg, n-butylbenzene up to 4.48 mg/kg, sec-butylbenzene up to 4.1 mg/kg, 1,2-dichloroethane up to 1.85 mg/kg, n-propylbenzene up to 6.88 mg/kg, tetrachloroethene up to 0.023 mg/kg, 1,2,4-trimethylbenzene up to 16.7 mg/kg, 1,3,5-trimethylbenzene up to 3.09 mg/kg, and tertiary butyl alcohol (TBA) up to 1.12 mg/kg.

II. Low-Risk Closure Review

Based on Regional Board staff review, we determined that this case is not ready for a low-risk closure for the following reasons:

California Environmental Protection Agency

Recycled Paper

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Mr. Robert Winters
Altos Rubber, Inc.

- 2 -

June 30, 2005

1. The vertical extent of soil contamination has not been fully delineated. In one or more of the borings advanced in October 2004 there is less than 20 feet of soil between the deepest detections of several compounds and the maximum soil depth sampled. Three of the soil borings (SB-1, SB-4, and SB-5) contain one or more compounds at detectable levels at the deepest depth sampled.
2. The lateral extent of soil contamination has not been fully delineated. The highest concentrations of many compounds were found in soil boring SB-4, advanced at the northern property line of the subject site. No delineation has been conducted to the north of this boring, or to the west of SB-4 and SB-1 (underneath the on-site building). Concentrations of compounds detected from 25 to 40 feet bgs indicate that some lateral spreading is accompanying vertical migration of contaminants through the silty soil.
3. Naphthalene and 1,2-dichloroethene have been detected in soil at levels exceeding the U.S. Environmental Protection Agency's (EPA's) Industrial Preliminary Remediation Goals (PRGs) of 4.2 mg/kg and 0.6 mg/kg, respectively.
4. No groundwater data has been collected at the site.

III. Request for a Workplan for Additional Site Assessment and Remedial Action

Based upon the above information, Regional Board staff determined that soil beneath the site have been contaminated with a release of hazardous wastes associated with the past operation of the facility. Conditions of the soil contamination beneath the site warrant additional subsurface investigation, and cleanup. To address Regional Board staff concerns, you are required to conduct the following:

1. To define vertical extent of contamination in each soil boring, at least four consecutive non-detect soil samples must be obtained at 5, 10, 15, and 20 feet below known or suspected contamination plume, unless a competent clay layer is encountered. However, if MTBE is detected, soil borings shall be extended until at least eight consecutive non-detect soil samples are obtained at 5 foot intervals below known or suspected contamination plume. To define horizontal extent of contamination, soil borings should "step out" into clean soil and encircle the contamination.
2. If soil contamination is detected within 25 feet (or 40 feet, if MTBE is detected in soil) of the groundwater level, then a minimum of three groundwater monitoring wells must be installed to determine groundwater flow direction and to monitor groundwater quality.
3. The construction, development, and abandonment of groundwater monitoring wells must comply with requirements prescribed in the California Well Standards (Bulletin 74-90), published by the California Department of Water Resources (can be seen at www.dpla2.water.ca.gov and to go "groundwater").
4. If groundwater monitoring wells are required, a quarterly groundwater monitoring program must be initiated at the site. Quarterly groundwater monitoring reports must be submitted

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Mr. Robert Winters
Altos Rubber, Inc.

- 3 -

June 30, 2005

according to the below schedule, with the first groundwater monitoring report due by October 15, 2005.

<u>Reporting Period</u>	<u>Report Due Date</u>
January – March	April 15 th
April – June	July 15 th
July – September	October 15 th
October – December	January 15 th

5. Soil and groundwater samples must be analyzed by Cal-LUFT GC/FID or Cal-LUFT GC/MS Method for total petroleum hydrocarbons as gasoline (TPH_G) and diesel (TPH_D), and by EPA Method 8260B for volatile organic compounds (VOCs), and fuel oxygenate compounds including methyl tertiary butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA). Ethanol is also required and shall be analyzed by either method above. The analytical detection limits must conform to the Regional Board General Laboratory Testing Requirements (1/05) (http://www.waterboards.ca.gov/losangeles/html/lab_report.html). All respective analytical methods must be certified by the California Environmental Laboratory Accreditation Program (ELAP). All analytical data must be reported by a California-certified laboratory.
6. Soil samples must be collected from each boring at a minimum of five-foot intervals, at changes in soil lithology, and at areas of obvious contamination. Soil samples must be field screened for petroleum hydrocarbons using either a PID or FID, and must be prepared and preserved per EPA Method 5035.
7. All groundwater monitoring wells must be surveyed to a benchmark for known elevation above mean sea level by a licensed land surveyor or registered civil engineer. Prior to collecting groundwater samples, free product thickness (if present) must be determined and the depth to water must be measured in all wells to be sampled. Then the wells are to be properly purged until the temperature, conductivity, and pH stabilize, and the water is free of suspended and settleable matter, before samples are collected for analysis.
8. If free product is present in any groundwater monitoring wells to be sampled, your quarterly groundwater monitoring reports must contain results of free products removal, including volume of the product recovered, the legal disposal point, and the hauler's reports of hazardous waste manifest, etc. Free product removal must be performed in accordance to Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2655.
9. You are also required to submit a remedial action plan (RAP) for remediation of soil containing contaminants of concern above EPA PRGs. The RAP must be submitted to the Regional Board evaluating at least three remedial technologies to determine the most effective technology for the site. Your RAP is due to this Regional Board by August 30, 2005.
10. A technical report detailing the results of this investigation must be submitted as part of your RAP due to this Regional Board by August 30, 2005.

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Mr. Robert Winters
Altos Rubber, Inc.

- 4 -

June 30, 2005

IV. General Requirements

1. All necessary permits must be obtained from the appropriate agencies prior to starting the work.
2. All work must be performed by or under the direction of a registered geologist, certified engineering geologist, or registered civil engineer. A statement is required in the report that the registered professional in direct responsible charge actually supervised or personally conducted all the work associated with the project. All technical submittals must contain a wet ink signature and seal by one of the registered professionals.
3. All reports submitted to this office must conform to the "Guidelines for Report Submittals" (June 1993), published by the Los Angeles County Department of Public Works.

Since we have limited resources and this case falls in a relatively low priority category, we encourage you to implement a reduced regulatory oversight (or "self-directed") process to complete the site assessment and/or corrective action deemed necessary for the site. After using your own judgment and completing the soil and possible groundwater cleanup and confirmation sampling results, you may prepare a closure package and request Regional Board staff to review the case for a potential low-risk closure. At that time, we will make a determination on the case closure.

If you have any questions on this matter, please contact Mr. Magdy Baiady at (213) 576-6699 or at mbaiady@waterboards.ca.gov.

Sincerely,

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

- 1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
- 2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

- 1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
- 2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

- 1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory
- 2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory

Organics Supervisor

Rojert G. Araghi
Laboratory Director

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

- 1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
- 2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.
